PROFESSIONAL SUMMARY

Artificial Intelligence Engineer with expertise in AI, ML, DL, NLP & Computer Vision, experienced in building end-to-end intelligent systems, optimizing workflows through automation, and delivering scalable, human-centric applications that bridge research with real-world impact.

TECHNICAL SKILLS

Languages: C, Java, Python, JavaScript, SQL
AI & Machine Learning: AI, ML, Deep Learning, NLP, Computer Vision, LLMs
Web Technologies: HTML, CSS, XML, RESTful APIs, React.js
Databases: SQL, NoSQL, MongoDB, Supabase
Core Concepts: DSA, OOP, Operating Systems (OS)
Tools: Git, GitHub, VS Code, Google Antigravity, Postman

PROFESSIONAL EXPERIENCE

AI & ML Intern | Evoastra Ventures Inc. Jan 2026 - Present
Remote / India

- Engineered a Natural Language to SQL (NL-to-SQL) translation engine utilizing the Groq LLM API and Llama 3 models to convert complex natural language queries into executable database commands within a custom Python GUI
- Processed the Salesforce WikiSQL dataset comprising 56,000+ training examples, developing algorithms to extract table schemas and parse complex SQL structures (aggregations, conditions) for optimized prompt generation
- Architected a modular, research-driven system featuring isolated API clients, automated data loaders, and dynamic prompt builders, successfully delivering a high-accountability business use case for internal teams

PROJECTS

ALPHA AI - Unified Neural Intelligence Platform | [GitHub](#) | [Live Demo](#)
React.js, Supabase, Edge Functions, OpenAI/Anthropic/Gemini APIs
Next-gen AI command center unifying 10+ frontier models into a single interface with "JARVIS" synthesis capabilities.

- Unified 10+ frontier models (GPT-4o, DeepSeek, Claude 3) into a high-performance Glassmorphic interface with 60FPS motion, offering a seamless, superior user experience compared to standard AI wrappers
- Engineered the JARVIS Synthesis Engine to orchestrate parallel queries across multiple AI agents, aggregating insights into a single authoritative "Master Response" for complex problem solving
- Architected a scalable serverless backend using Supabase PostgreSQL and Edge Functions, implementing end-to-end Row Level Security (RLS) to ensure deep privacy and enterprise-grade data protection

JARVIS - Real-Time Multimodal Desktop Agent | [GitHub](#)
Python 3.10, Google Gemini 2.0 Flash, LiveKit (WebRTC), OpenCV, WMI, PySide6
Desktop-native AI assistant capable of real-time voice interaction, hardware control, and multimodal perception.

- Architected a low-latency multimodal pipeline using Google Gemini 2.0 Flash and LiveKit WebRTC, bypassing traditional transcription latency to achieve instant, emotion-aware audio interaction
- Developed a native Windows automation engine utilizing Python WMI and ctypes to execute granular system commands, integrated alongside a PySide6 holographic interface with concurrent OpenCV vision processing

AI-Haqq - Islamic Knowledge Platform & AI Assistant | [GitHub](#) | [Live Demo](#)
Next.js 14, React.js, Express.js, Supabase (pgvector), Google Gemini Pro, RAG
Comprehensive full-stack web application featuring a verifiable AI assistant and advanced religious utility algorithms.

- Built a comprehensive full-stack Next.js 14 application serving the complete Qur'an and 60,000+ Hadiths, integrating sub-second full-text search and complex geolocation algorithms for accurate daily prayer utilities
- Engineered "Basira AI" via a Retrieval-Augmented Generation (RAG) pipeline using Google Gemini Pro and Supabase pgvector, ensuring responses are strictly grounded in authentic texts with verifiable source citations

EDUCATION

Diploma in Artificial Intelligence 2023 - 2026
Government Polytechnic Bethamcherla
